COST & MODEL ROUTING

At a glance

Cost-Efficient Model Routing

- Quark routing selects the cheapest adequate model per task, optimizing cost without compromising quality.
- WorfGate ensures secure credential brokering and auto-remediation, maintaining system integrity and compliance.
- Control-lane provides precise cost attribution, averaging \$0.002-0.003 per deliberation, ensuring transparency and scalability.

Why it matters: Delivers high-quality autonomous coding assistance at minimal operational cost, backed by robust security and cost transparency.

Quark's view

- Evaluate model costs per task to ensure cheapest adequate model is used
- Enforce Quark cost profile: primary models for critical tasks, low-cost models for support tasks
- Monitor and report cost per mission, token efficiency metrics, and budget burn rate to identify areas for optimization

Why it matters: By optimizing model routing and cost, clients can expect significant reductions in their overall expenses while maintaining high-quality results.
