

STORY AGENT · PILLAR

Delivery & Project Management

How this pillar works and why it matters.

Team assembled by Riker: Jean-Luc Picard, William Thomas Riker, Miles Edward O'Brien, Deanna Troi.

Sovereign Execution at Scale

- Cost-Optimized Orchestration: Premium model directs work to the most cost-effective agent per task, with deliberation costs locked at \$0.002–0.003 per decision.
- Governed Autonomy: WorfGate enforces zero-trust credential brokering while auto-remediating execution risks (green/yellow/red) without manual intervention.
- Transparent Control Lane: Real-time async-status tracking with timeout guardrails ensures auditable progress, cost attribution, and deterministic outcomes.

Why it matters: You retain strategic oversight while the system executes with the precision of a runtime-verified Fargate deployment.

Reliable Implementation Delivery Framework

- Phase-gated rollout with automated rollback checkpoints at each major dependency.
- Real-time cost and performance monitoring via WorfGate governor, ensuring operations stay within defined guardrails.
- Shadow-testing integration to validate autonomous functionality before full deployment.

Why it matters: Ensures predictable, cost-effective delivery with built-in safeguards to mitigate risk.

Miles Edward O'Brien's view

- Automated testing for 150 MCP tools ensures reliable functionality
- Containerized deployment on AWS Fargate enables scalable and secure orchestration
- Quark routing and WorfGate governor provide real-time cost control and auto-remediation

Why it matters: By leveraging our robust delivery and project management framework, clients can expect reliable, efficient, and cost-effective deployment of the Story Agent platform.

Deanna Troi's view

- Stakeholder needs are accurately captured through empathetic analysis of user requirements
- Unstated assumptions and emotional resistance to proposed solutions are identified and addressed
- Organizational impact and technical specifications are carefully considered to prevent defects in production

Why it matters: By ensuring that all aspects of the project are carefully considered, clients can trust that their needs are being met and that the final product will meet their expectations.

END OF PILLAR

Delivery & Project Management — recap

- **Jean-Luc Picard:** Sovereign Execution at Scale
- **William Thomas Riker:** Reliable Implementation Delivery Framework
- **Miles Edward O'Brien:** Miles Edward O'Brien's view
