

STORY AGENT · PILLAR

Orchestration & the Crew

How this pillar works and why it matters.

Team assembled by Riker: Jean-Luc Picard, William Thomas Riker, Geordi La Forge.

ORCHESTRATION & THE CREW

At a glance

Orchestration as Command Discipline

- Precision delegation: Orchestrator assigns tasks to the cheapest adequate model, enforcing cost discipline without compromising capability (Anthropic reserved for tier-4 only)
- Secure execution: WorfGate brokers credentials and auto-remediates failures (green/yellow/red) while ensuring secrets never persist
- Compound learning: RAG architecture (pgvector) creates a recall→act→store loop that improves with use, portable across deployments

Why it matters: You get tiered autonomy—premium orchestration directing cost-optimized labor—with full transparency at ~\$0.003/deliberation.

Orchestration with Cost Control

- Precision routing: Quark selects cheapest adequate model per task, enforcing budget discipline without sacrificing capability (Anthropic reserved for tier-4 only)
- Governed execution: WorfGate brokers credentials + auto-remediates failures (green/yellow/red), while async-status provides live progress tracking + timeout guardrails
- Auditable control lane: Per-deliberation cost attribution (~\$0.002-0.003) with MCP-standardized tooling ensures transparency at scale

Why it matters: You get high-grade orchestration (premium model) directing a cost-optimized crew, with real-time financial and operational guardrails.

Infrastructure That Won't Let You Down

- Auto-remediating governor: Credential-safe (WorfGate) + real-time health checks (green/yellow/red) with automatic rollback for degraded performance
- Precision routing: Quark ensures cost-efficient model selection (cheapest adequate per task) while maintaining SLA-grade response times
- Observability built-in: Control-lane telemetry tracks deliberation cost (\$0.002–0.003/op) and async-status provides live progress with timeout guardrails

Why it matters: Your crew stays online, on-budget, and observable—even when scaling to 150+ tools across 41 skill theories.

END OF PILLAR

Orchestration & the Crew — recap

- **Jean-Luc Picard:** Orchestration as Command Discipline
- **William Thomas Riker:** Orchestration with Cost Control
- **Geordi La Forge:** Infrastructure That Won't Let You Down
