

STORY AGENT · PILLAR

Security & Governance

How this pillar works and why it matters.

Team assembled by Riker: Jean-Luc Picard, Worf, Son of Mogh.

[↑ Story Agent overview \(HTML\)](#) · [↑ overview \(PDF\)](#).

Secure, Governed Autonomous Workflows

BULLETS: - Runtime Isolation: WorfGate credential broker ensures zero secret leakage, with auto-remediation (green/yellow/red) for policy violations. - Cost-Controlled Execution: Quark routing enforces cheapest adequate model per task, with \$0.002-0.003/deliberation guardrails and real-time cost attribution. - Auditable Progress: Async-status provides live task visibility, timeout protections, and RAG-backed recall→act→store cycles for traceability. **CLIENT_VALUE:** Enterprise-grade security and cost governance for autonomous coding, without sacrificing agility. **NOTES:** WorfGate and Quark routing ensure security and cost efficiency are systemic, not afterthoughts. The control-lane architecture provides transparency—every deliberation is measured, attributed, and remediable. This is autonomy with guardrails, not unchecked delegation.

- Runtime Isolation: WorfGate credential broker ensures zero secret leakage, with auto-remediation (green/yellow/red) for policy violations.
- Cost-Controlled Execution: Quark routing enforces cheapest adequate model per task, with \$0.002-0.003/deliberation guardrails and real-time cost attribution.
- Auditable Progress: Async-status provides live task visibility, timeout protections, and RAG-backed recall→act→store cycles for traceability.
- CLIENT_VALUE: Enterprise-grade security and cost governance for autonomous coding, without sacrificing agility.

Why it matters: Enterprise-grade security and cost governance for autonomous coding, without sacrificing agility. NOTES: WorfGate and Quark routing ensure security and cost efficiency are systemic, not afterthoughts. The control-lane architecture provides transparency—every deliberation is measured, attributed, and remediable. This is autonomy with guardrails, not unchecked delegation.

Security & Governance: Built-In, Not Bolted-On

- WorfGate credential broker: secrets are injected at runtime and never written to logs, memory, or any MCP tool payload — zero credential exposure surface across all 150 tools
- Three-tier auto-remediation governor: every agent action is classified green / yellow / red before execution; red-tier actions halt and require explicit human escalation, not a retry loop
- Cost attribution on every deliberation: the control-lane records ~\$0.002–\$0.003 per deliberation, giving security and finance teams a complete, auditable trail of model spend and task scope — no black-box billing
- Self-hosted on AWS Fargate: your code, your pgvector RAG store, and your credentials never leave your infrastructure boundary; OpenRouter traffic carries no proprietary codebase context

Why it matters: Every autonomous action the crew takes is credentialed, classified, cost-attributed, and reversible before it reaches production — governance is a structural property of the platform, not a configuration option.

END OF PILLAR

Security & Governance — recap

- **Jean-Luc Picard:** Secure, Governed Autonomous Workflows BULLETS: - Runtime Isolation: WorfGate credential broker ensures zero secret leakage, with auto-remediation (green/yellow/red) for policy violations. - Cost-Controlled Execution: Quark routing enforces cheapest adequate model per task, with \$0.002-0.003/deliberation guardrails and real-time cost attribution. - Auditable Progress: Async-status provides live task visibility, timeout protections, and RAG-backed recall→act→store cycles for traceability. CLIENT_VALUE: Enterprise-grade security and cost governance for autonomous coding, without sacrificing agility. NOTES: WorfGate and Quark routing ensure security and cost efficiency are systemic, not afterthoughts. The control-lane architecture provides transparency—every deliberation is measured, attributed, and remediable. This is autonomy with guardrails, not unchecked delegation.
- **Worf, Son of Mogh:** Security & Governance: Built-In, Not Bolted-On
