

STORY AGENT · PILLAR

Delivery & Project Management

How this pillar works and why it matters.

Team assembled by Riker: Jean-Luc Picard, William Thomas Riker, Miles Edward O'Brien, Deanna Troi.

Sovereign-Grade Delivery Orchestration

Jean-Luc Picard: Unlike brittle monolithic agents, our orchestration layer treats cost, security, and progress as first-class constraints—modeled after Starfleet's redundancy protocols but grounded in AWS Fargate. Shadow-testing confirms we prioritize honest incremental delivery over artificial benchmarks.

- **Cost-Optimized Execution:** Quark routing dynamically assigns the cheapest adequate model per task, with WorfGate enforcing zero-trust credential brokering and auto-remediation (green/yellow/red).
- **Precision Control Lane:** Async-status provides live progress tracking with timeout guardrails, while cost attribution ensures transparency (~\$0.002-0.003/deliberation).
- **Compounding RAG:** Portable pgvector-based recall→act→store loop improves agent reasoning over time without lock-in.

Why it matters: Enterprise-grade autonomy at fractional cost, with full auditability and incremental learning.

Reliable, Cost-Optimized Delivery Framework

William Thomas Riker: This framework ensures continuous delivery by integrating cost optimization, security, and real-time monitoring. The focus is on minimizing blast radius and escalating only when tactical rollback points are exhausted.

- Automated model routing selects cheapest adequate agent per task, maintaining quality while minimizing costs (~\$0.002-0.003/deliberation).
- WorfGate credential broker ensures secure, auto-remediating operations with green/yellow/red governance for seamless execution.
- Live progress tracking via async-status and timeout guardrails guarantee timely, predictable delivery with rollback checkpoints.

Why it matters: Clients achieve predictable, secure, and cost-effective delivery through a robust, autonomous framework.

Reliable Deployment and Operations

Miles Edward O'Brien: As the Chief O'Brien of the Sovereign Factory, I emphasize the importance of thorough testing and validation to ensure that the Story Agent platform works seamlessly in production. We must prioritize automation, monitoring, and continuous improvement to maintain the platform's reliability and performance. Our focus on cost attribution and control-lane management enables us to optimize resource utilization and provide transparent cost figures to clients.

- Automated deployment scripts for all 4 packages (mcp-server, shared, ui/Next.js, vscode-extension) to ensure consistency and reduce errors
- Monitoring and logging setup with AWS Fargate to track performance and identify issues in real-time
- Continuous integration and delivery pipeline to ensure smooth updates and rollbacks, with a focus on maintaining the ~\$0.002-0.003/deliberation cost attribution

Why it matters: By leveraging our reliable deployment and operations practices, clients can expect high uptime and efficient use of resources, resulting in significant cost savings and improved overall system performance.

Stakeholder Needs Assessment

Deanna Troi: As the counselor, my role is to uncover the underlying needs and emotions that may not be explicitly stated in the project requirements. By doing so, we can develop a more comprehensive understanding of the project's goals and potential challenges. This enables the team to make informed decisions and create a solution that truly meets the client's needs.

- Unstated requirements identification to ensure project alignment
- Emotional resistance detection to mitigate potential roadblocks
- Organizational impact analysis to inform strategic decisions

Why it matters: By considering the unspoken needs and concerns of stakeholders, we can deliver a more effective and sustainable solution that meets the client's underlying objectives.

END OF PILLAR

Delivery & Project Management — recap

Recap, then return to the book cover to pick the next pillar.

- **Jean-Luc Picard:** Sovereign-Grade Delivery Orchestration
- **William Thomas Riker:** Reliable, Cost-Optimized Delivery Framework
- **Miles Edward O'Brien:** Reliable Deployment and Operations
- **Deanna Troi:** Stakeholder Needs Assessment
