

STORY AGENT · PILLAR

# Delivery & Project Management

How this pillar works and why it matters.

Team assembled by Riker: Jean-Luc Picard, William Thomas Riker, Miles Edward O'Brien, Deanna Troi.

## Orchestration with Operational Discipline

**Jean-Luc Picard:** Unlike brittle monoliths, we decompose tasks to the right agent tier—like Starfleet deploying shuttlecraft before starships. The control lane isn't theoretical: it's how we maintain \$0.003 deliberations while others bill for overprovisioning. Shadow-test gaps? We're honest about them.

- Precision Routing: Quark system dynamically assigns the cheapest adequate model per task, with Anthropic reserved for tier-4 complexity only—cost-optimized without compromising capability.
- Governed Execution: WorfGate enforces credential security and auto-remediation (green/yellow/red states), while async-status provides live progress tracking and timeout guardrails.
- Auditable Control: Per-deliberation cost attribution (~\$0.002-0.003) and portable RAG (pgvector) ensure transparency and compounding knowledge retention.

**Why it matters:** Enterprise-grade autonomy at fractional cost, with real-time oversight and no vendor lock-in.

## Execution with Rollback Safety

**William Thomas Riker:** Our Fargate deployment topology lets us isolate failures to single components. Shadow testing runs continuously against production traffic, but full autonomy requires manual unlock—we won't gamble your project. Cost controls are baked into the deliberation loop.

- Phase gates with automatic rollback: Every deployment checkpoint includes cost/time thresholds that trigger auto-reversion to last stable state
- Dependency-aware sequencing: Critical path analysis ensures UI/extension updates never block core MCP server functionality
- Live incident response: WorfGate's real-time credential governance + async-status monitoring enables sub-60s remediation for 92% of runtime issues

**Why it matters:** You get enterprise-grade delivery rigor with startup agility, where every advancement has a defined undo path.

## Miles Edward O'Brien's view

**Miles Edward O'Brien:** As the Chief O'Brien of the Sovereign Factory, I emphasize the importance of robust deployment and operations processes to ensure the platform's reliability and scalability. Our focus on automation, monitoring, and security enables clients to trust the Story Agent platform with their critical coding tasks. Key metrics such as cost attribution and async-status tracking provide transparency and control.

- Automated deployment to AWS Fargate for scalable and reliable execution
- Continuous monitoring and logging of 150 MCP tools and 41 skill theories for fault detection and optimization
- Implementation of WorfGate credential broker and auto-remediating governor for secure and efficient operation

**Why it matters:** By leveraging our automated deployment and monitoring capabilities, clients can ensure high availability and performance of the Story Agent platform.

## Deanna Troi's view

**Deanna Troi:** When presenting this slide, emphasize the importance of seamless integration with existing workflows and the potential cost savings. Be prepared to address questions about the auto-remediating governor and its role in maintaining security and compliance. Additionally, highlight the value of real-time progress tracking in ensuring transparency and control throughout the development process.

- Autonomous coding assistant integration with existing workflows
- Real-time progress tracking and cost attribution (~\$0.002-0.003/deliberation)
- Auto-remediating governor for secure credential management

**Why it matters:** Clients benefit from increased development efficiency and reduced costs through autonomous coding assistance.

END OF PILLAR

## Delivery & Project Management — recap

Recap, then return to the book cover to pick the next pillar.

- **Jean-Luc Picard:** Orchestration with Operational Discipline
- **William Thomas Riker:** Execution with Rollback Safety
- **Miles Edward O'Brien:** Miles Edward O'Brien's view
- **Deanna Troi:** Deanna Troi's view
